Sewer connection to floor waste

The UltraBase™ Advantage:

- No gutter or special sewer lines required
- Kennels can fit into spaces not normally designed for animal housing
- Safe, secure and durable
- Easy to clean

Color Choices:

Aurora (standard colour)

Grey

Stretch your kennel space!

MASON COMPANY
A Tradition of Trusted Animal Enclosures Since 1892

Go where you didn't think possible with Mason's elevated UltraBase™. With no gutter or special sewer lines required, the UltraBase™ system permits you to install indoor kennels in spaces not normally constructed for housing animals.

The elevated base and on-floor PVC piping routes liquids and wastes to the nearest sewer outlet. The newly redesigned, one-piece composite fiberglass base unit securely attaches to FRP isolation side panels for a watertight seal. UltraBase™ features an easy-to-clean, anti-slip floor and adjustable legs, allowing for installation on uneven floors.

The UltraBase™ can be installed as a stand-alone unit or in a series with chainlink swing gates, stainless steel gates, or our new galvanised welded wire gates. Swing-up rest benches which provide added comfort and permit easy drain access are optional.

See reverse for unit details and options.
