

ISO-CARE™

Isolation Units

KENNEL

SOLUTIONS PTY LTD

The ISO-Care Advantage:

- Safely isolates infectious animals in an easy to clean unit
- Exhaust fan and drainage system reduces mess and odours
- Ships ready to use
- No special isolation rooms required

Ideal For Treating Parvo Virus!

A growing number of veterinary hospitals and animal shelters are choosing to ISO-Care for isolating animals due to contagious diseases or quarantine requirements. ISO-Care's innovative tempered glass design keeps all discharge within the unit—no more messy leaks! Plus, the attractive fibreglass interior washes clean in seconds. A two tiered drainage system keeps wastes and liquids away from animals, exiting through ISO-Care's floor drain, which can be connected to a sewer outlet.

Available in single or double deck configurations, ISO-Care units ship completely assembled ready for operation.

FRP Sani-Cage™

Stacked Cage Units

The Stacked Cage System of the Future

Not your average stacked caging system, our Sani-Cage features a moulded, solid-surface fibreglass cage body with individual built-in drains that makes clean up a snap. A raised polyethylene grid floor keeps animals away from liquids, while the sloped cage floor underneath routes all liquids to the hidden drain in the back corner.

Sani-Cages come with a form-welded stainless steel gate for years of trouble-free operation. Available in 914mm and 1219mm widths double-stacked, and 914mm width triple-stacked, Sani-Cage modular units can be configured for your exact caging needs. The units arrive completely assembled with internal plumbing already complete. Just route the final plumbing from the bottom of the units to your floor drain, and your Sani-Cages are ready to use!

The FRP Sani-Cage Advantage:

- Built-in drains simplifying cleaning.
- Molded fibreglass body looks warmer and more attractive than cold metal cages.
- Comes completely assembled.
