Stretch your Kennel space!

Go where you didn't think possible with our elevated UltraBase. With no gutter or special sewer lines required, the UltraBase system permits you to install indoor kennels in spaces not normally constructed for housing animals.

The elevated base and on-floor PVC piping routes liquids and wastes to the nearest sewer outlet. The newly redesigned, one-piece composite fibreglass base unit securely attaches to FRP isolation side panels for a watertight seal. UltraBase features an easy-to-clean, anti-slip floor and adjustable legs, allowing for installation on uneven floors.

The UltraBase can be installed as a stand alone unit or in a series, with Chainlink swing gates or our stainless steel gates. Swing-up rest benches, which provide added comfort and permit easy drain access, are optional.
